NATUROPATHIC ONCOLOGY RESEARCH INSTITUTE (NORI)**

**AND THE
INTERNATIONAL NATUROPATHIC CLINICAL RESEARCH INSTITUTE**

**AND THE
INSTITUTIONAL REVIEW BOARD (IRB)**

February 11, 2022

MINUTES AND MEETING NOTES

In accordance with the requirements of the United States Code of Federal Regulations, Title 21, Chapter 1, Subchapter A, Part 56, as well as Title 45, Part 46, the forty-ninth regular quarterly meeting of the American Naturopathic Research Institute (ANRI) and the Naturopathic Oncology Research Institute (NORI) and the International Naturopathic Clinical Research Institute (INCRI) and the Institutional Review Board (IRB) was called to order at 12:05 p.m., February 11 at 1250 E. Baseline Rd., Suite 205, meeting in Suite 203, Tempe, AZ 85283.

MEMBERS AND GUESTS

Physicians and an attorney were in attendance

Pre-meeting melatonin discussion

Melatonin has been studied for cancer patients. Much of commercial melatonin is spiked with additives. Melatonin – never found any LD50. NOAEL, never found enough mg.

Peer review of letter from math and statistics associate professor

We did peer review of a letter submitted for publication regarding COVID vaccination rate compared to COVID incidence over dozens of countries.

Study of local athletes

Two local sports coaches work with about 20 kids, roughly ages 7 to 17. The kids talked freely about who had gotten the COVID vaccines and who had not. The two coaches observed among the vaccinated kids:

- None is now performing up to his / her personal best of last year;
- None has the stamina to perform the usual exercise drills as last year;
- All complained of chest pain after the shots;
- The unvaccinated girls are now beating the vaccinated boys, which they could not do last year.

We discussed the paper that came out of those interviews.

Discussion of preprint on secondary vaccine effects

Editorial suggestions were made regarding this preprint of a local study on secondary side effects of those in the proximity of COVID-vaccinated individuals.

For how long do the COVID-vaccinated make spike proteins? It seems that spike protein generation continues for about 4 months.

What do SARS-CoV-2 and measles have in common? They are single-strand, enveloped RNA viruses. Measles is characterized by very low vitamin A. This may be a good argument for incorporating vitamin A into a COVID treatment protocol,

GRAND ROUNDS

Two COVID cases, a late stage case and an early stage case, were discussed.

NEXT MEETING

2nd Friday of May, 2022. - May 14, 2022
