INTERNATIONAL NATUROPATHIC CLINICAL RESEARCH INSTITUTE**

**AND THE
INSTITUTIONAL REVIEW BOARD (IRB)**

February 12, 2021

MINUTES AND MEETING NOTES

In accordance with the requirements of the United States Code of Federal Regulations, Title 21, Chapter 1, Subchapter A, Part 56, as well as Title 45, Part 46, the forty-fourth regular quarterly meeting of the American Naturopathic Research Institute (ANRI) and the Naturopathic Oncology Research Institute (NORI) and the International Naturopathic Clinical Research Institute (INCRI) and the Institutional Review Board (IRB) was called to order at 12:05 p.m., February 12, 2021 at 1250 E. Baseline Rd., Suite 205, meeting in Suite 203, Tempe, AZ 85283.

MEMBERS AND GUESTS

9 members and guests were in attendance.

COVID-19

We discussed some strategies for treatment if we ever meet a patient with COVID-19.

UPDATE ON A CLINICAL TRIAL

In the first ongoing clinical trial discussed today, an additional NMD, MD and pharmacist are now participating. Also wanting to add one more question to protocol regarding severity:

“How would you rate your overall symptom severity?” Zero to 10.

Add 2nd site out of California with MD, NMD, compounding pharmacist.

We had a motion to approve adding the above question on symptom severity to the questionnaire, seconded, unanimously approved.

Motion to approve expansion to the California location. The group seconded the motion and unanimously agreed to add the California location to the study.

COVID-19 VACCINES

Johnson & Johnson vax is an adenovirus vax, which is totally inapplicable. Adjuvants in Novovax are less problematic than other covid shots. 89% effectiveness reported with Novovax and supposedly works against newer variants as well. They all seem to have some potential for problems.

We discussed antibody-dependent enhancement, and its propensity to lead to autoimmune attack of bodily tissue. A problem is also the analog in capsid protein and syncytiotrophoblast proteins of the placenta. → immune system misfiring against placenta → miscarriage even in mid-term pregnancies.

Discussion of PEG and anaphylaxis. mRNA is technically a gene therapy, and shouldn't be called a vaccine.

We discussed politics surrounding covid, vaccines, masks.

Some mask studies are linked here, on request of providing them with these minutes:

1st part: loose particulate from masks and lung vulnerability

https://pdmj.org/papers/masks_false_safety_and_real_dangers_part1/

2nd part: microbial consequences of mask-wearing

https://pdmj.org/papers/masks_false_safety_and_real_dangers_part2/

3rd part: hypercapnia and hypoxia problems from masks

https://pdmj.org/papers/masks_false_safety_and_real_dangers_part3/

4th part: Mechanisms by which masked populations & individuals spread more covid than from unmasked.

https://pdmj.org/papers/masks_false_safety_and_real_dangers_part4/

A surgeon's explanation of why masks don't work:

<https://www.sott.net/article/438827-A-classic-fallacious-argument-If-masks-dont-work-then-why-do-surgeons-wear-them>

Article on data related to pandemic assessment
https://pdmj.org/papers/is_there_a_pandemic/

2ND STUDY

There was a question about language used in documents provided to the patient, and changes were made to that language with motion, seconded motion and approval by the group.

It was also agreed to have each participating clinic use their own letterhead for documentation with each patient.

GRAND ROUNDS

Case 1: MS patient. Horowitz estimated that 70% of his MS patients had Lyme. Recent patient: Western Blot showed 4 of 5 markers. Classic Lyme symptoms. Had seen a neurologist, who did a Kreutzfeldt / Jacobs test. Patient was actually positive. So now you're dealing with a prion, a piece of protein that acts like a virus. Treatment ideas are still all theoretical. Ozone helped.

Case 2: Breast cancer patient: Manna Sachet can be helpful. It's extract from the lymph glands of the salt-water crocodile. It has dual anti-microbial properties. The manna sachet gold soak is really helpful against recurrent breast tumors at mastectomy or lumpectomy surg site. Soak the sachet in 1/3 cup of hot water. Let sit 15 mins. Take the sachet out, and drink the water. Then take still damp, but now cool sachet as topical poultice on the skin, seems to heal within 24 hours. \$40 per patch. Sting, burn, scab over, done.

NEXT MEETING

Friday, May 14, 2021.
